Fullstack Software Engineering

Highly motivated and results-oriented software engineering leader with over 15 years of experience across diverse technical domains. Proven ability to lead and mentor teams to build and deliver impactful projects, such as replacing a legacy ERP system and improving e-commerce performance. Expertise in full-stack development, software design, product ownership, and Agile methodologies.

WORK EXPERIENCE

AXONS • Bangkok, Bangkok City, Thailand • Feb 2023 - Present
Software Engineering Specialist

- Contributed to improving software engineering practices by leading training sessions for software developers on best practices for analysis and designing a software system.
- Consulted with a software development team to gather requirements and create a product roadmap for a new project. Conducted stakeholder interviews, facilitated requirement gathering sessions, and synthesized findings into a prioritized roadmap defining software features to be developed over multiple release cycles.
- Researched industry best practices for software development and published internal standards and guidelines to align the organization.

RentSpree Thailand • Bangkok City, Thailand • Sep 2021 - Feb 2023
Software Engineer

- Enabled seamless project execution as an Epic lead by aligning team efforts with project management, resulting in reduced development time and increased project success rate.
- Spearheading research on the Microfrontend, focusing on enabling the system to handle increased traffic and user load effectively.

SCB – Siam Commercial Bank • Bangkok Metropolitan Area • Mar 2020 - May 2021
Software Development Team Lead

- Led a successful front-end development team in the delivery of a new ERP platform, resulting in an improvement in system performance and a 15% reduction in customer support tickets.
- Guided product owner team, resulting in a reduction in development rework, leading to improved project timelines and cost savings.
- Refactored outdated frontend code, achieving a reduction in bugs and enhancing overall system stability, leading to improved user experience and customer satisfaction.

Ascend Corporation • Bangkok Metropolitan Area, Thailand • Nov 2014 - Mar 2020
Product Owner

- Improved warehouse efficiency through feature modification, resulted in increased order fulfillment and reduction in operational costs.
- Successfully integrated with customer's SAP system, in-house software, and 3rd party logistics provider, resulting in increased order processing efficiency and improved customer satisfaction.

- Boosted company revenue by successfully launching a new project, serving as a gateway provider between parcel delivery service and other merchants, and opening up new business opportunities.

Technical Lead

- Improved inventory fulfillment system efficiency by leading an Agile team in implementing Java Spring Framework, resulting in reduced warehouse operational costs.
- Led team in developing new services, resulting in increased customer acquisition and boosting revenue, contributing to business growth and market expansion.
- Boosted team productivity through bi-weekly sharing meetings and the implementation of SonarQube, resulting in improved code quality and adherence to coding standards.

Senior Software Engineer • Full-time

- Enhanced the E-commerce platform's checkout process, resulting in decreased abandoned carts and increased overall conversion rates, driving higher sales and customer satisfaction.
- Guided a new joiner software engineer in adopting best practices in Agile, Scrum, PHP Lalavel, AWS, and Unit testing, resulting in reduced development time and improved code quality.
